

# Simple. Smart. Safe. Sound.

## PEAK PERFORMANCE + ENVIRONMENTAL STEWARDSHIP = OUR COMMITMENT TO YOU

Design Master® makes changing color easy! We provide the tools to finesse your use of color in design and create the color you need, quickly! Developed for the many unique applications demanded by creative professionals for floral and decorative projects, our sprays are **FAST DRYING** and **VERSATILE**. From one can, apply color with a soft flexible finish on the most delicate of items (including fresh flowers) or a hardwearing color finish on hard surfaces.

Since 1961, Design Master has maintained our position as the world leader in **RESPONSIBLE** and **INNOVATIVE** color and design. We've always accepted the rigorous stewardship of our environment while providing the best products available to the industry. Since the beginning, we are proud to be Made in the USA. Here's what you need to know about our environmental consciousness:

### SAFE AND SOUND

- ▶ Design Master is proud to have *removed CFCs in all our products eight years prior to their ban in 1978.* (Soon you won't see the words "no CFCs" on our label due to FTC guidelines on greenwashing.)
- ▶ Our sprays are packaged in steel cans made from more than 25% post-consumer recycled steel and are recyclable when empty. Plus, every can is hermetically sealed, will last for years and will not leak, spill, spoil or evaporate.
- ▶ We offer a comprehensive list of safe handling procedures for responsible use and disposal, as well as, clear directions for use on every label. *Our spray coatings are non-toxic when dry.*

### COMPREHENSIVE COMPLIANCE

- ▶ Design Master sprays are *in compliance with* the California Regulation for Reducing Ozone formed from Aerosol Coating Product Emissions and the National Volatile Organic Compound Emission Standards for Aerosol Coatings, *the most stringent air quality regulations in the United States.*
- ▶ Design Master's regulatory department ensures that all products comply with environmental regulations, routinely updating responsible practices in the manufacturing, packaging and distribution of our products to produce less waste and more efficiency.
- ▶ Design Master's head of formulations has served on many aerosol industry committees regarding regulatory compliance for many years. He knows formulae and labeling well.

**"COMPLIES WITH THE MOST  
STRINGENT AIR QUALITY  
REGULATIONS IN THE  
UNITED STATES."**

### TESTING AND TRANSPARENCY

- ▶ All aerosol coatings must be labeled in compliance with the ASTM D 4236 standard. It is required. Design Master labels were in compliance with this standard 6 years before the regulation was effective. *Design Master continues to provide you with well-tested, compliant products.*
- ▶ World renowned Duke University performs exhaustive third party testing of every Design Master product and label. We respect what is required for packaging aerosol coatings. You can buy and use Design Master with that knowledge. Read our labels. We invested heavily to make them right.
- ▶ Design Master has voluntarily enrolled in and submitted all our formulae for even more extensive testing by Art and Creative Materials Institute (ACMI). *We earned the right to place the ACMI CL logo on our products.*
- ▶ Safety Data Sheets, *SDS* (formerly MSDS—Material Safety Data Sheets) are required to be available in the work place. Should physicians, you or your employees need technical information, they provide it. Ours *are easily available on the Design Master Website at the bottom of our Home Page, tabbed SDS.*
